

1st General Assembly, Bilbao 2025

Towards One Health surveillance of AMR in Europe

Lucie Collineau, ANSES, France

Sofia Ny, Public Health Agency of Sweden

Heike Schmitt, National Institute for Public Health and the Environment (RIVM), The Netherlands

Moirra Kelly, Sciensano, Belgium

@EU-JAMRAI ● ● ● ● ● ● ● ● ● ●

I- Introduction

- 25 partner countries
- Main stakeholders/target groups
 - National AMR surveillance experts
 - National governmental agencies, expert laboratories and ministries
 - EU and UN agencies

To **reinforce** the European strategy for One Health surveillance of AMR

1. **Strengthen** the national surveillance systems on AMR in the human health sector
2. Achieve a **full-scale implementation** of the European AMR surveillance network in veterinary medicine (EARS-Vet)
3. **Set up** a European AMR surveillance network in the environmental sector (**EARS-Env**)
4. Develop a **national annual One Health surveillance report** in each participating member state

COUNCIL RECOMMENDATION

on stepping up EU actions to combat antimicrobial resistance in a One Health approach

(2023/C 220/01)

National Action Plans on AMR

Study on the design of a monitoring framework of the EU One Health Action Plans against AMR and Council Recommendation on stepping up EU actions to combat antimicrobial resistance in a One Health approach

Final Report

Tetra Tech International Development & Intellera Consulting
November 2024

Tt TETRA TECH
International Development

Surveillance of AMR in animals

Indicator type and number	Indicator
SURVEILLANCE Outcome Indicator 03	Extent of AMR surveillance in animals in each Member State
SURVEILLANCE Output Indicator 07	Extent to which monitoring and reporting of AMR is done in accordance with (Articles 1.4, 3 and 4 of) Commission Implementing Decision (EU) 2020/1729 on the monitoring and reporting of antimicrobial resistance in zoonotic and commensal bacteria

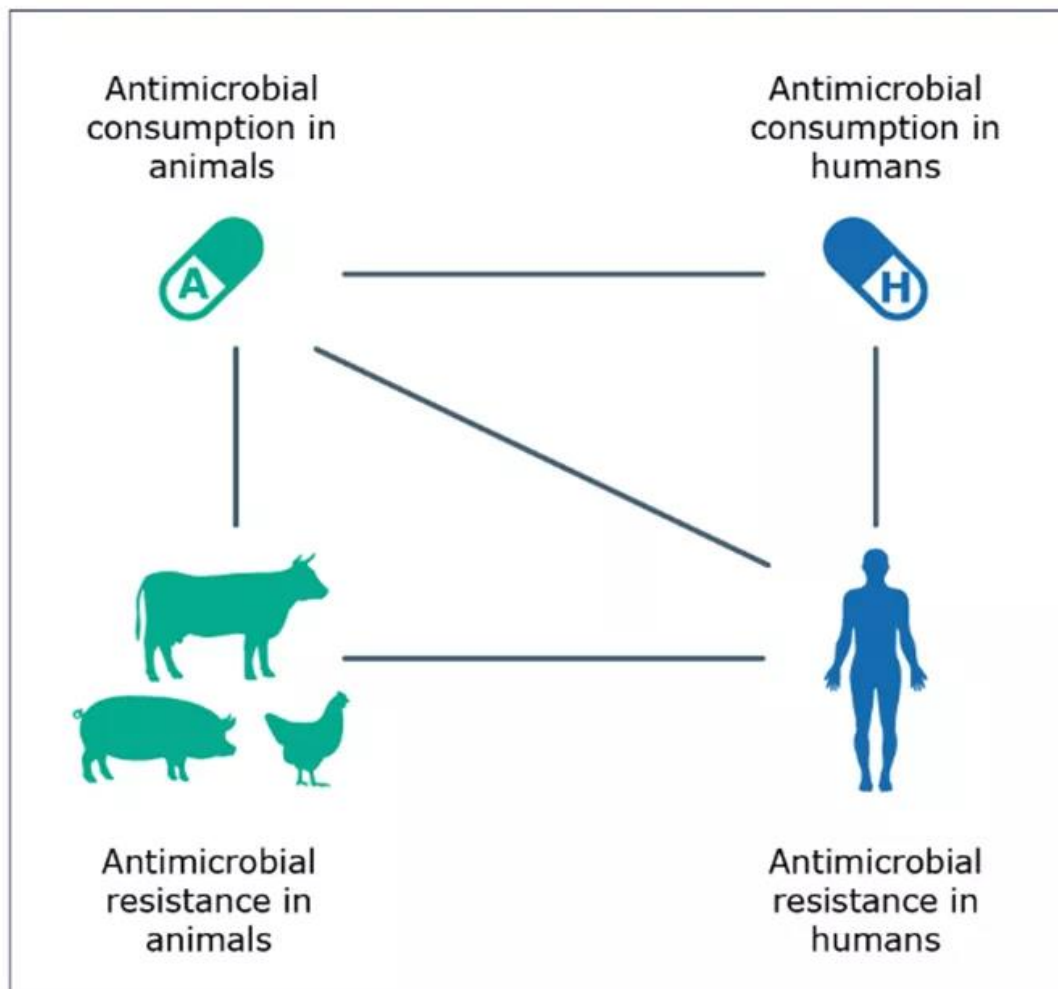

Main gaps in the European surveillance

Environmental surveillance?

Diseased animals?

Healthy animals

Carriage of zoonotic and indicator bacteria

National integrated analysis of AMC and AMR?

Diseased humans

Bloodstream invasive infections

Other type of infections?

2- EARS-Vet and EARS-Env

Two networks to address AMR surveillance gaps

EARS-Vet: Surveillance of AMR in diseased animals

Lucie Collineau

French Agency for Food, Environmental and Occupational Health & Safety
(ANSES), France

So far, AMR surveillance in animals has been focusing on the food chain

- Harmonized active monitoring
- Indicator and zoonotic bacteria from healthy food-producing animals
- Valuable insights on foodborne AMR transmission

Limited data coverage

170 isolates, every second year in
poultry, pig, cattle

No data about companion animals

Little guidance on antimicrobial
stewardship in veterinary medicine

Example: the emergence of carbapenemase-producing Enterobacterales in food-producing and companion animals

Transboundary and Emerging Diseases

The European Antimicrobial Resistance Surveillance network in Veterinary medicine

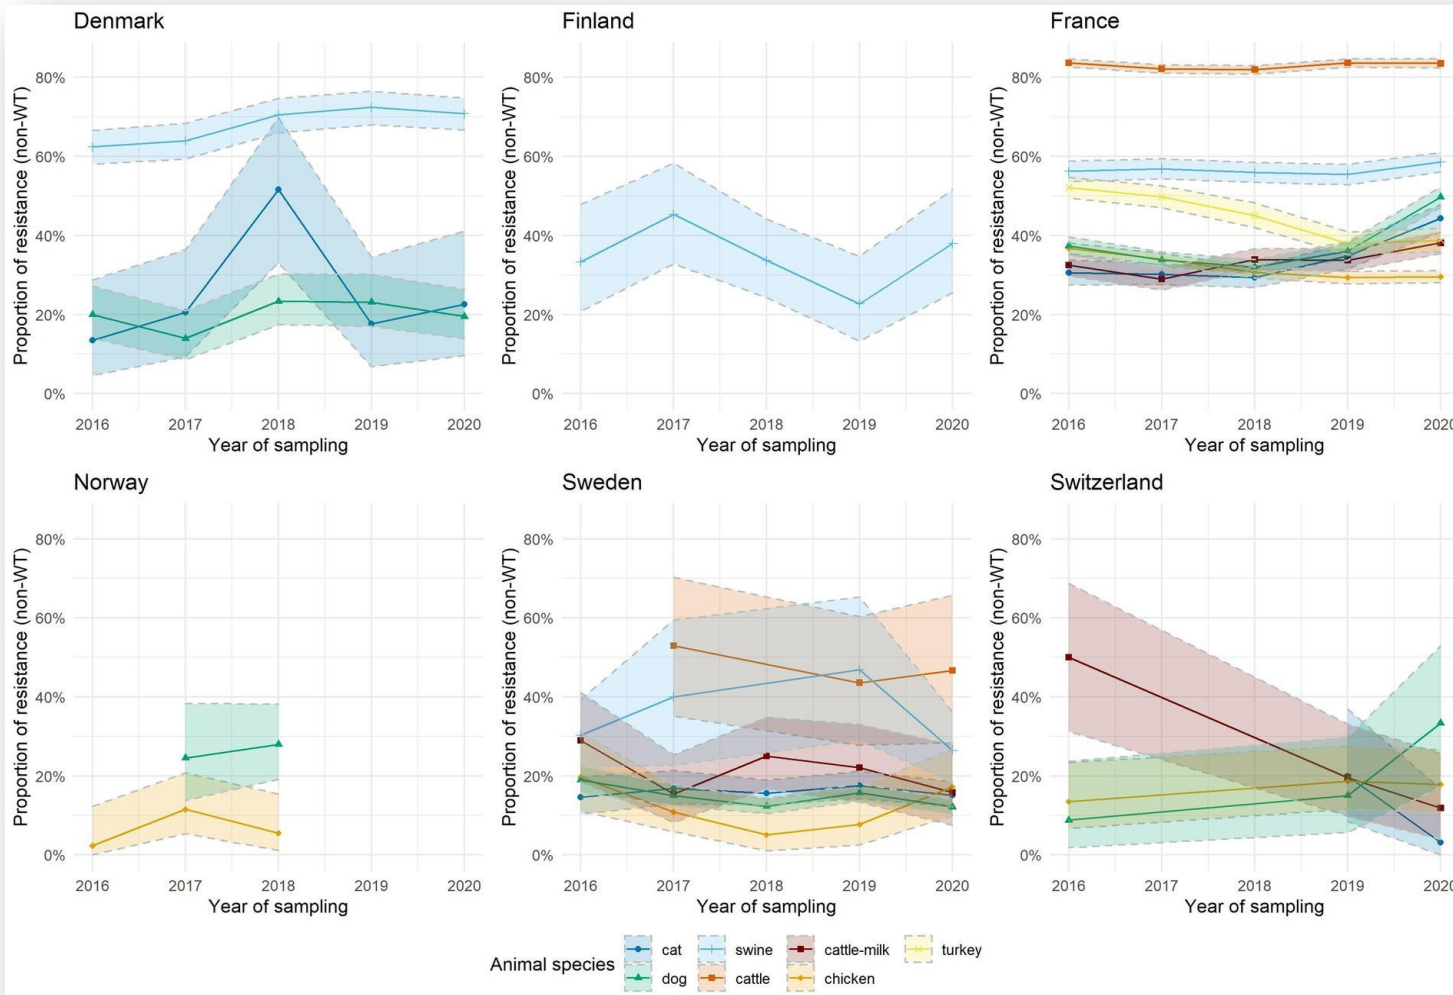

- A **unique network** initiated in EU-JAMRAI
- Our ambition: **Paralleling EARS-Net in the human sector, we aim to close a gap on AMR surveillance in clinical isolates from animals**, in order to:
 - Complement the existing EFSA monitoring in the food chain
 - Support antimicrobial stewardship in veterinary medicine
 - Add on the JIACRA pool of data
 - Support risk assessment
 - Advise EU-level policy making and monitoring of interventions
 - Improve animal health and public health

-

Trends of *E. coli* resistance to aminopenicillins over 2016–2020

EARS-Vet pilot study:

- 9 countries, 11 partners
- Sharing available data over 2016 – 2020
- A unique dataset of 140,110 isolates
- Strengths
 - Trends and variability within and between countries
 - Access to raw data
 - Relatively low cost (passive surveillance)
- Limitations
 - Data volume and representativeness
 - Comparability and lack of harmonisation
 - Missing ECOFFs interpretation criteria

Lagrange et al. 2023

- Making **EARS-Vet** a full-scale initiative
 - **Expand the network:** 40 partners, 18 countries
 - Facilitate **routine data collection, analysis and reporting**
 - **Improve harmonization** and data comparability
 - **WGS of selected isolates**
 - Evaluate dissemination of well-known resistances
 - Explore resistance mechanisms of rare or emerging resistances
- **Integration within the EU AMR surveillance landscape**

- **Facilitate routine data collection, analysis and reporting**

- Update of the EARS-Vet scope; extension to horses, sheep and goats
- Development of EARS-Vet database and WHONET module
- Data sharing agreement signed by all partners in Feb 2025
- First open data call launched in Feb 2025

- **Improve harmonization**

- Drafting EARS-Vet manual
- Definition of customized EARS-Vet MIC plates

- **WGS of selected isolates**

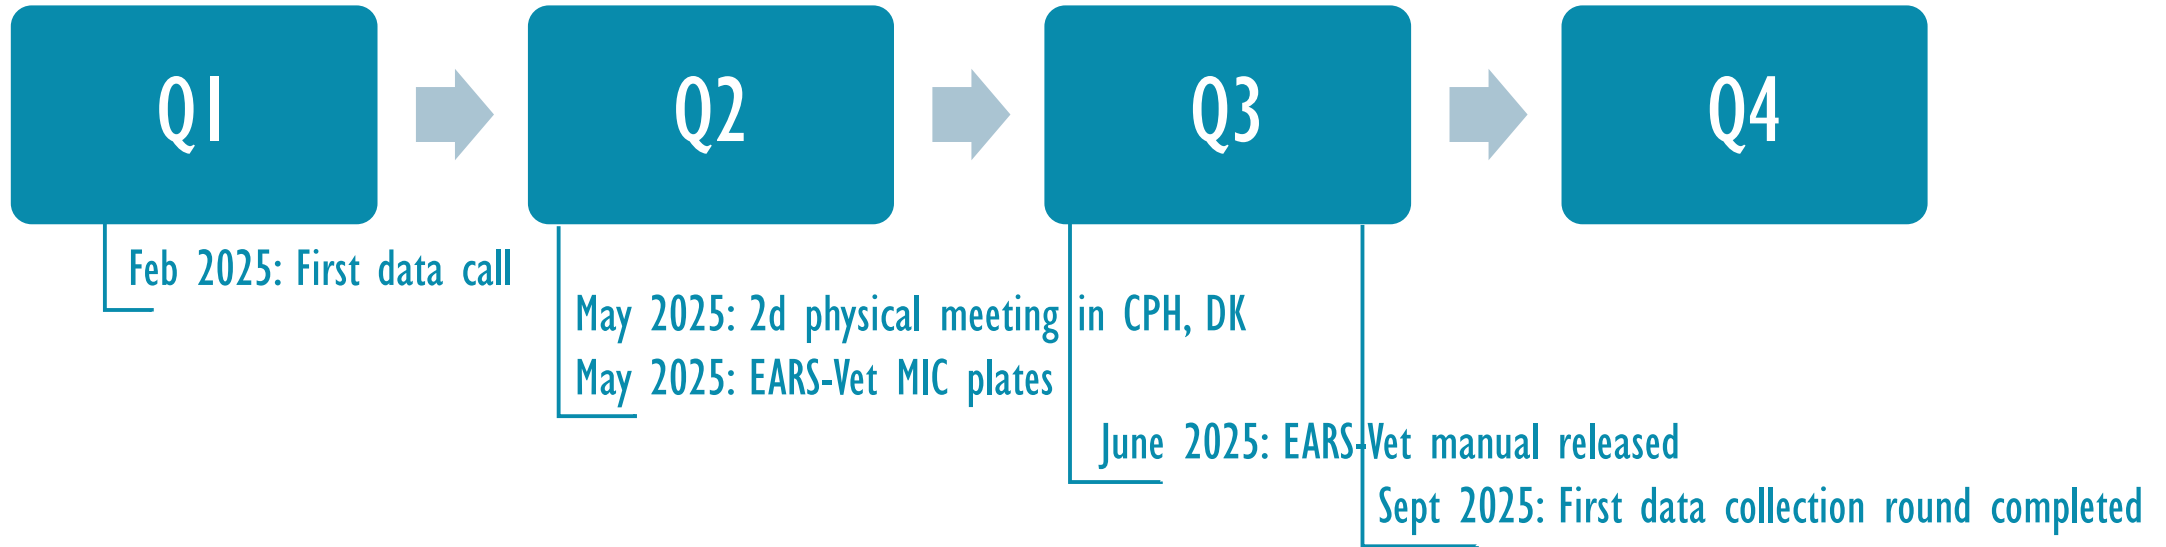

- Selection of AMR isolates to be sent to WGS

- **Established collaboration with EFSA, FAO InFARM, AHWP SOA8**

First EARS-Vet physical meeting in Paris, April 2024

- Planned activities and milestones in **year 2**

- Already thinking about **year 3 and beyond**
 - Dissemination of the results: EARS-Vet report and dashboard, scientific publication, policy brief
 - Integration within the EU AMR surveillance landscape
 - EARS-Vet sustainability

COUNCIL RECOMMENDATION

on stepping up EU actions to combat antimicrobial resistance in a One Health approach

(2023/C 220/01)

Developing integrated systems for the surveillance of AMR and AMC encompassing human health, animal health, plant health, food, wastewater and the environment [...](5e)

Continue to assess on the basis of EFSA opinions animal diseases caused by bacteria resistant to antimicrobials, to ascertain if it is needed to list any of those diseases in Regulation (EU) 2016/429(57) with a view to categorising them for any regulatory surveillance, control or other management measures (6)

Ears-Vet

Surveillance of AMR in animals

Indicator type and number	Indicator
SURVEILLANCE Outcome Indicator 03	Extent of AMR surveillance in animals in each Member State
SURVEILLANCE Output Indicator 07	Extent to which monitoring and reporting of AMR is done in accordance with (Articles 1.4, 3 and 4 of) Commission Implementing Decision (EU) 2020/1729 on the monitoring and reporting of antimicrobial resistance in zoonotic and commensal bacteria

EARS-Env: Surveillance of AMR in the environment

Heike Schmitt,

National Institute for Public Health and the Environment (RIVM), The Netherlands

• Scientific consensus :

- AMR is present in the environment (water, soils), including in pathogens
- Anthropogenic pressures affect AMR dynamics
- Exposure to AMR in the environment represents an additional transmission route

Environmental surveillance contributes to understanding the spread of AMR and better estimating the related human and animal health risks.

Environmental contamination in a high-income country (France) by antibiotics, antibiotic-resistant bacteria, and antibiotic resistance genes: Status and possible causes

ScienceDirect

Current Opinion in
Microbiology

Natural recreational waters and the risk that exposure to antibiotic resistant bacteria poses to human health

Anne FC Leonard¹, Dearbháile Morris², Heike Schmitt³ and William H Gaze¹

- Call for integrated surveillance including the environment
 - Council Recommendations, UNGA
- Lack of harmonized approaches towards AMR surveillance in the environment

Goal: to define a common surveillance strategy addressing the contribution of the environment to AMR in the One Health framework

Surveillance: from science to action

Jointly determine objectives, common sampling strategies and indicators for surveillance

- For countries as guidance for their NAP actions

EARS-Env: An environmental AMR surveillance network

Establish a network to support joint national surveillance in Europe

- For integration with other sectors and networks where possible

YI: Two **questionnaires** (present and future) on existing surveillance and vision of the partners

Own vision

Use of questionnaire responses to develop strategies and objectives

Antimicrobial usage

Explore what we need to know about usage of antimicrobials (fungicides)

Consultation with other stakeholders

Alignment with other sectors and current European regulations

Pilot

Surveillance campaign with central elements of the surveillance strategy

Definition of objectives

- AMR trends in the environment and/or in humans (wastewater-based surveillance)
- Emergence of new forms of AMR
- Study efficiency of interventions
- Provide data for risk assessment

Sampling strategies

- Propose specific approaches for environmental matrices per objective: water, soil, wastewater

Determine common indicators and methods

- Depending on objectives
- Taking into account human health/ animal health sector

Seeking input from human and animal health sector

- Information needs for environmental surveillance
- Choice of common indicators

Co-ordination with activities at different levels:

- Existing experience (Eionet, quadripartite integrated surveillance)
- Collaboration with JA EU-WISH
- Input for Urban Waste Water Treatment Directive

World Health Organization

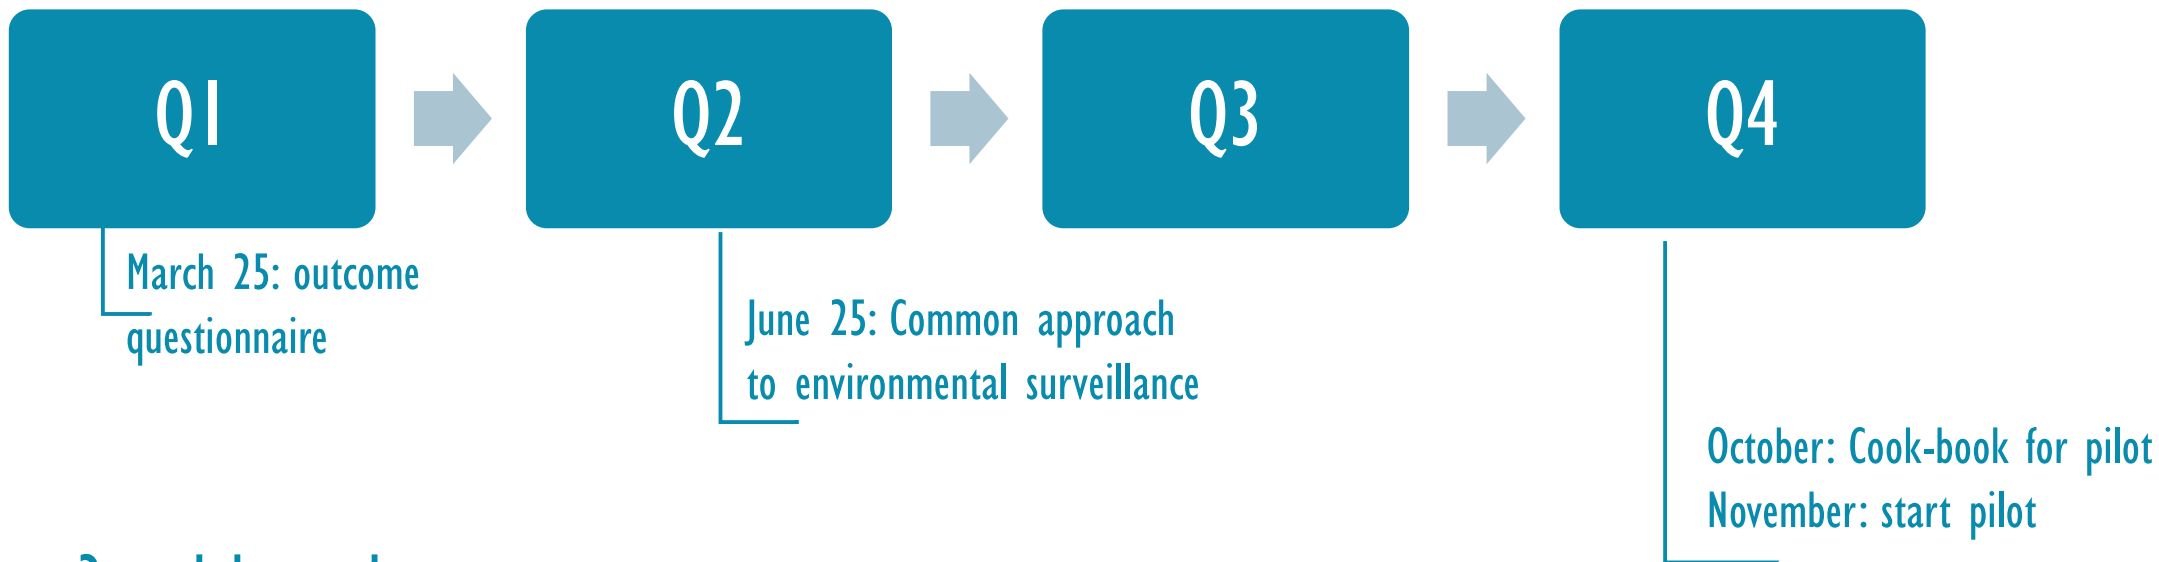

The joint actions EU-WISH and EU-JAMRAI 2 initiate mutual collaboration

On the 18th of February 2025, a meeting was held between leaders of the working groups and the coordinators of each project, to discuss shared objectives, synergies and practicalities. A good opportunity to learn from each other and work together.

WHO-Europe, Food Safety &
Zoonotic Diseases

Questions:

1. What are your expectations about veterinary and environmental surveillance? What content would you like to see to make this surveillance useful from your perspective?
2. Where do you see the added value of the EARS-Vet and EARS-Env network compared to existing surveillance in Europe? Where do they fit within the European surveillance landscape?

3- Improving Human and One Health surveillance

Improving human health surveillance

Sofia Ny, Public Health Agency of Sweden

Now

Part 1

- Perform an inventory of national AMR surveillance in JAMRAI 2 countries.
- Collect information about the systems and content but not the surveillance data itself. No duplication with Ears-Net and GLASS.

Later

Part 2: Use the results from the inventory to make an interactive roadmap of national surveillance.

Part 3: Make an inventory of capacity strengthening projects. Based on the inventories and the roadmap suggest and reinforce capacity strengthening projects.

Why are we making an inventory?

- A joint compilation of national surveillance systems is currently missing
 - which AMR pathogens that are under national surveillance?
 - how is the surveillance structured?
 - what is the data used for?
- Knowledge about national surveillance systems will make it easier to collaborate.
- There is a lot of data but not in a format that allows joint publication and visualisation.

Inventory of national microbiological surveillance of AMR

Information collected via questionnaire

- National recommendations in place affecting AMR surveillance?
- How is WGS used at the national reference laboratory for AMR?
- How is the national surveillance structured?
- Several questions include legal perspectives.

Status: deadline for answering questionnaire was end of February, analysis ongoing.

Pathogens that are part of the inventory:

- *Escherichia coli*:
Third-generation cephalosporin resistance, carbapenem resistance, colistin resistance
- *Klebsiella pneumoniae*:
Third-generation cephalosporin resistance, carbapenem resistance, colistin resistance
- *Pseudomonas aeruginosa*:
carbapenem resistance
- *Acinetobacter baumannii*:
carbapenem resistance
- *Staphylococcus aureus*:
methicillin resistance
- *Enterococcus faecium* and *Enterococcus faecalis*:
vancomycin resistance
- *Streptococcus pneumoniae*:
penicillin resistance and macrolide resistance
- *Haemophilus influenzae*:
ampicillin resistance
- *Clostridioides difficile*

Culture materials:

- Blood/CSF
- Urine
- Wound/tissue
- Upper respiratory tract
- Lower respiratory tract
- Diarrhea (*C. difficile*)

Visualisation of data in a joint dashboard

Some examples of what the dashboard will visualise

- Which AMR pathogens are notifiable i.e. under mandatory surveillance in partner countries.
- Current national surveillance of AMR pathogens isolated from urine samples, the estimated coverage and comparability of the collected data.
- Which partner countries that have national treatment recommendations in place for the most common infections.

Dashboard target groups

- National surveillance experts
- EU and UN agencies
- Policy advisors.

Technical information

- Developed using R-shiny by a working group of people from 8 partner countries.
- Code open to the public via GitHub.
- First version online in June 2025.

TrACSS great source of inspiration!

Global Database for Tracking Antimicrobial Resistance (AMR)
Country Self- Assessment Survey

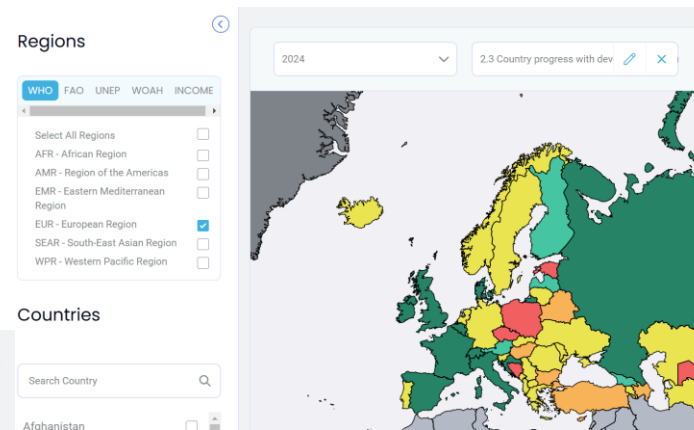

Food and Agriculture
Organization of the
United Nations

World Health
Organization

World Organisation
for Animal Health
Founded as OIE

Why are we making a dashboard?

- Makes complex data understandable and easy to access.
- Increases the availability of key information that many actors are interested in.
- Is important for collective memory and accountability.
- Provides a baseline - a good opportunity for follow up, sustainability and development.

- JAMRAI 2 project: develop the concept and the content of the **dashboard**.
- The plan is to complete **two development cycles**.
- Looking at different options for **long-term hosting**.

COUNCIL RECOMMENDATION

on stepping up EU actions to combat antimicrobial resistance in a One Health approach

(2023/C 220/01)

Human AMR surveillance dashboard

Guidelines for the treatment of common infections (11.a and supporting 13).

Pathogens resistant to last line treatments are notifiable diseases under national legislation (5.b).

Expand human AMR surveillance by including more specimen types (in addition to blood samples) (5.a).

Surveillance of AMR in human health

Indicator type and number	Indicator
SURVEILLANCE Outcome Indicator 01	AMR surveillance status in humans in each Member State
SURVEILLANCE Output Indicator 01	Extent to which epidemiological surveillance in the EU is implemented according to Commission Implementing Decision (EU) 2018/945 on the communicable diseases and related special health issues to be covered by epidemiological surveillance as well as relevant case definitions
SURVEILLANCE Output Indicator 02	Number of Member States whose AMR surveillance of bacteria in humans includes all isolates from clinical microbiology laboratories (in addition to bloodstream and cerebrospinal fluid isolates (invasive isolates))
SURVEILLANCE Output Indicator 03	Number of Member States with national legislation requiring that infections caused by critical (high negative human health impact) multidrug-resistant organisms resistant to last line treatments are notifiable diseases (e.g. carbapenem-resistant <i>Acinetobacter baumannii</i> , carbapenem-resistant Enterobacteriaceae (e.g. <i>Klebsiella pneumoniae</i> , <i>Escherichia coli</i>) and <i>Candida auris</i>)
SURVEILLANCE Output Indicator 04	Number of Member States with expanded surveillance in humans to pathogens with emerging or established AMR due to their exposure to substances in the environment, in particular those used in plant protection products or biocidal products

One Health surveillance

Moira Kelly, Sciensano, Belgium

Towards National One Health Surveillance of AMR

Why One Health Surveillance of AMR?

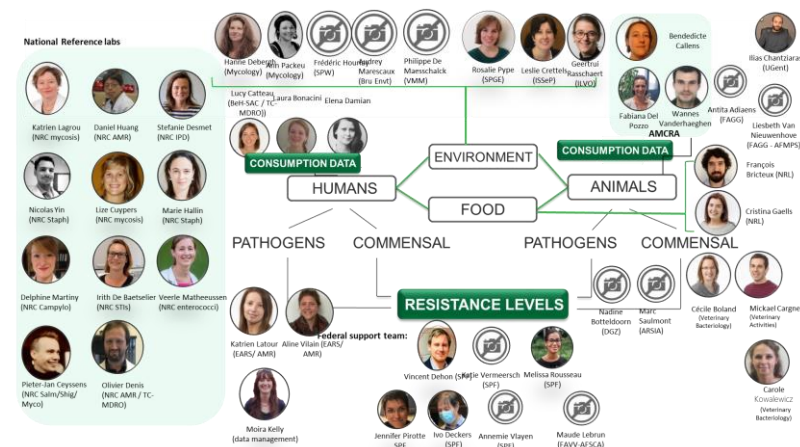

Fragmented Data

Disjointed action

Clear overview

Common language

Collaboration

United recommendations and priorities

How to support national OH Surveillance?

Year 1

Map the national surveillance landscape

- What programs/data to include in OH report
- Who to include in OH network

Year 2

Build the OH network and capacity

OH EpiCap tool

- Collaboration of actors across sectors
- How to improve "One Healthness" of surveillance landscape

Year 3-4

Develop the OH report

Improve reporting of the data:

- Interactive dashboards
- Integrated analyses
- Common primary/secondary indicators

Structured questionnaire:

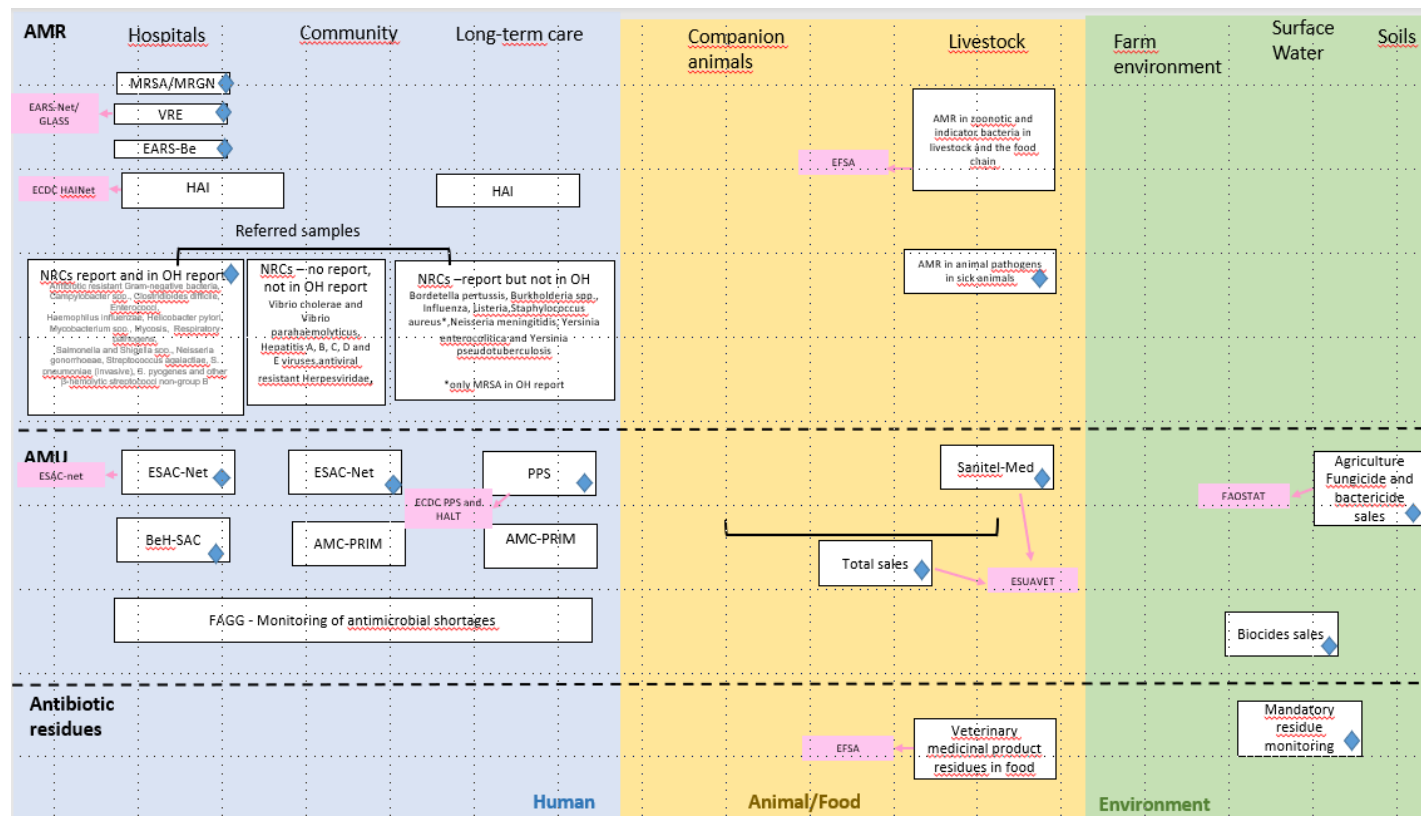

- Programs / Actors
- Data availability
- Mandatory/voluntary
- WGS reported
- Participation in national / supranational networks

Broader scope (AMR and AMC, all sectors, all antimicrobials)

First step in building OH AMR network

***Aimed at supporting national level reporting**
Scope and data adapted to national situation

Common template for results:

10-11th February 2025, Brussels

Day 1: Current OH surveillance of AMR

- Mapping exercise results/experience
- SWOT analysis of current OH surveillance landscape

Day 2: Future/optimal OH surveillance of AMR

- Presentations from established OH AMR reports
- Panel discussion with policy makers
- Discussion of potential key indicators

OUTPUTs:

- White paper: OH AMR surveillance in Europe — where are we today, and where do we want to be tomorrow?
- Key indicator selection

Year 1

Map the national surveillance landscape

- What programs/data to include in OH report
- Who to include in OH network

Year 2

Build the OH network and capacity

OH EpiCap tool

- Collaboration of actors across sectors
- How to improve "One Healthness" of surveillance landscape

Year 3-4

Develop the OH report

Improve reporting of the data:

- Interactive dashboards
- Integrated analyses
- Common primary/secondary indicators

- 8-12 panelists
- Consensus evaluation for each indicator
 - Organisation -Operation —Impact
- Input into application
- Diagnostics of strengths and weaknesses
 - concrete and direct actions to reinforce collaborations

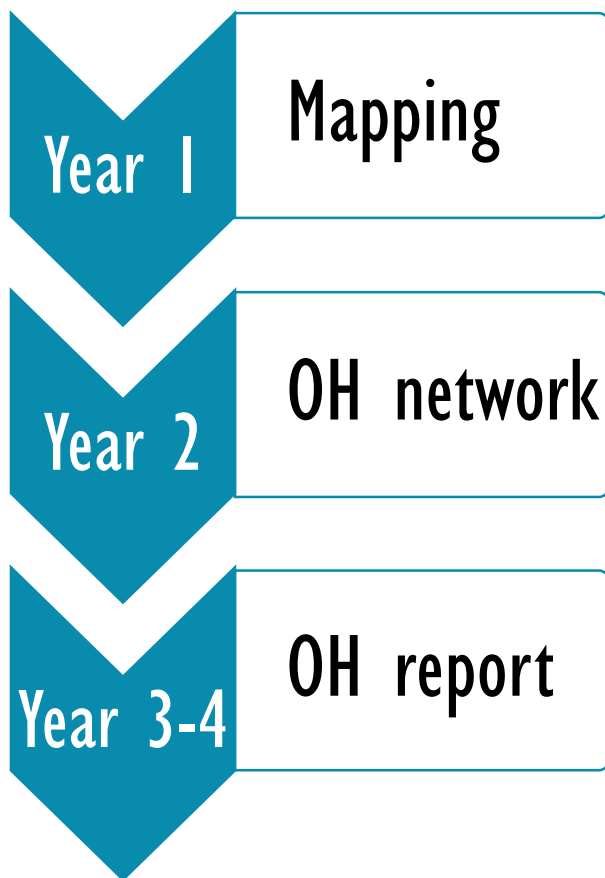

COUNCIL RECOMMENDATION
on stepping up EU actions to combat antimicrobial resistance in a One Health approach
(2023/C 220/01)

Monitoring Framework

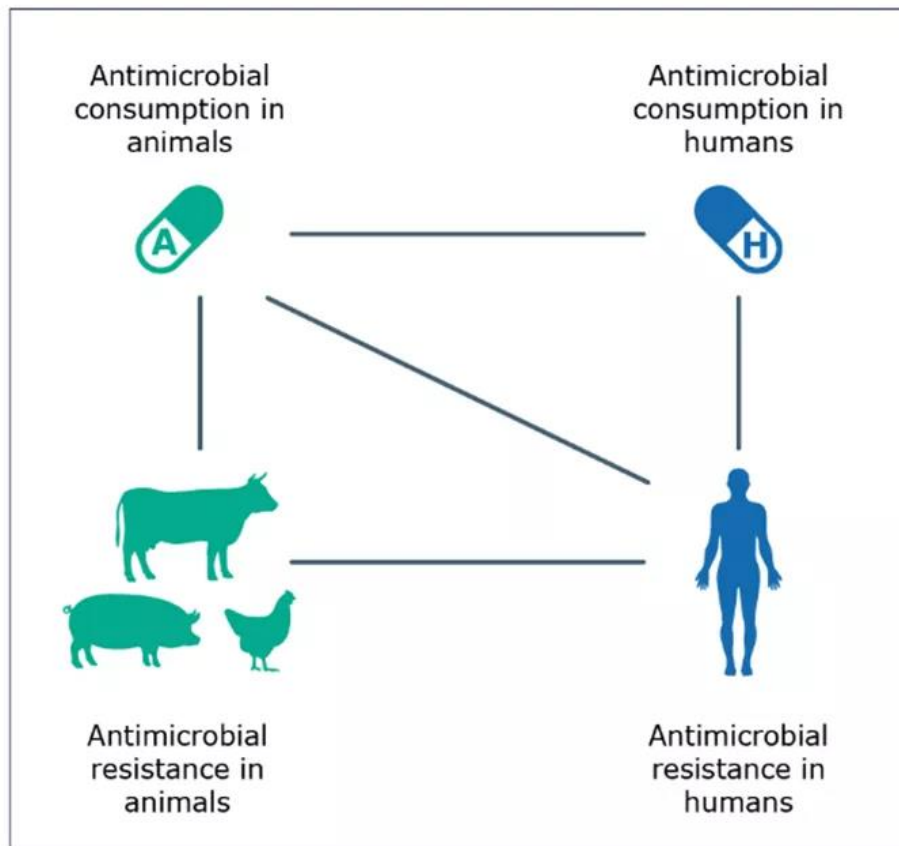

Close existing surveillance and monitoring gaps and ensure completeness of data [...] on both AMR and AMC at all levels to support the prudent use of antimicrobials in human health (5)

Developing integrated systems for the surveillance of AMR and AMC encompassing human health, animal health, plant health, food, wastewater and the environment [...](5e)

Integrated surveillance

Indicator type and number	Indicator
<i>SURVEILLANCE Outcome Indicator 05</i>	<i>Extent to which integrated surveillance of AMC & AMR is achieved at EU level</i>
<i>SURVEILLANCE Output Indicator 11</i>	<i>Number of Member States with any form of integrated and continuous systems for monitoring and surveillance of AMR and AMC encompassing human health, animal health, plant health, food, wastewater and the environment</i>

(JIACRA IV, 2019-2021). EFSA J. 2024

Main surveillance gaps

- Diseased animals?

EARS-Vet

- Environmental surveillance?

EARS-Env

- Expanding surveillance in humans?

**Human AMR
surveillance
dashboard**

- National analysis of AMR from a One Health perspective?

**National One
Health reports**
